

8'000. With IMS!

Our customers' time is precious. Being aware of this, Vogel engineers have developed once again a technology to maximize the output of the invested capital. The benefit: improved return on investment.

The **"Integrated Manufacturing System"** (IMS) uses

the already introduced AVT-system together with an optimized set-up of machinery to manufacture composite hollow core insulators with LSR silicone.

This invention is a great result of our strategy creating innovative and beneficial solutions for our customers.
